Vista Higher Learning & Clever
Implementation Overview

About

For Clever-enabled districts, Vista Higher Learning (VHL) can provide rostering and single sign on (SSO) integrations for our digital products. As part of this partnership, we are able to bring all your applications into one secure portal and provide SSO for everyone in the district.

Overview

SSO only
- Students access through the Clever portal and self-enroll

SSO + Rostering
- Students are auto-enrolled based on course information from the district's Student Information System (SIS) data
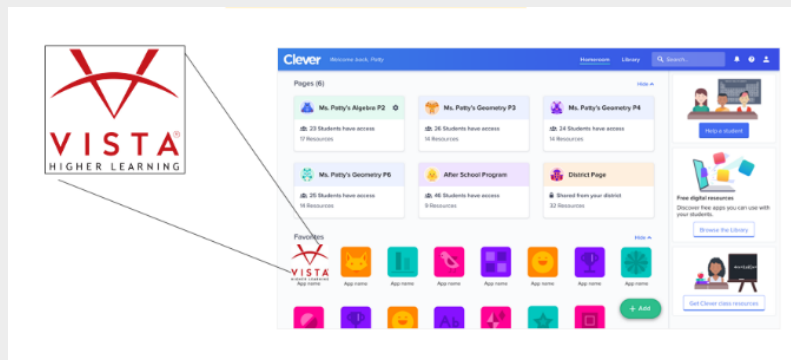

Details

SSO & SSO + Rostering
- Teachers and students get their accounts created automatically from the Clever/SIS portal.
- Teachers create Courses and Sections in vhlcentral.
- Works with any student and rostering file formats.

SSO
- Teachers can add students, move students, and drop students.

SSO + Rostering
- Teachers link one VHL section to one Clever class. They cannot map multiple VHL sections to the same Clever class.
- Students are automatically enrolled in sections based on the teacher's section mapping.
- All subsequent changes to student enrollment happen via nightly updates. There is no way for teachers within vhlcentral to add/drop/move students. There is no way to 'stop' changes in the SIS from applying to vhlcentral. The SIS becomes the sole 'source of truth' for all enrollments.

Implementation / How It Works

Implementation
- The data that passes to VHL is dependent on the data shared by district's tech team.
- If using Clever, each school in the district must be individually mapped by VHL's implementation team.
- If using Rostering, teachers must link their sections in order for students to access content.

Integrating Clever with Vista Higher Learning is subject to approval during the adoption and proposal process.
